

Summary Assignment: Prime Number Checker

Objective

Write a Python program to determine whether a given number is Prime or Not Prime.

Tasks

- Accept a number from the user.
- Check the number using a for loop.
- Display whether it is Prime or Not Prime.

Sample Output

```
Enter a number: 17
17 is a Prime Number
```

Concepts Covered

- Variables
- User Input
- Type Conversion
- for Loop
- if Statement
- Modulo Operator (%)

Instructions

- Take input from the user.
- Write clean and properly indented Python code.
- Display the output in the required format.
- Do not use advanced concepts unless taught.

Learning Outcomes

- Understand prime numbers.
- Practice conditional statements.
- Strengthen looping concepts.
